With antibiotics to which according to the antibiogram, the  
Agents we most sensitive to (Powercef=Rocephin)  
**Result of Medication:** **Positive** - "The gangrene responded to treatment"  
**Length of time to achieve result:** 1 week  
**Name/Patient Details:** T.B.; Male; 64 years old; Goat Rearer  
**Additional Notes:** see source document  
**Source Document:** SD-032
25. **Ailment/Diagnosis:** **Rashes**  
**Symptoms:** Not listed  
**Treatment Regimen:** Cleanshield (Topical) – regimen not listed  
**Result of Medication:** **Mixed Result** – "She has...a sedentary profession. She came 14<sup>th</sup> December 2006 with dark-  
drown coloured rashes under the folds of both breasts. She had tried all sorts of creams, lotions  
and powders all with disappointment for over 3 years. She came with skepticism and unbelief. She  
thinks that nothing could help her. She took a few milliliters of TSD with great reluctance. After  
application, she returned on Boxing Day, 26<sup>th</sup> December saying "This your product may be the  
answer". She collected more of the product, returned Jan 4<sup>th</sup> still expressing more hope. On the  
14<sup>th</sup> January 2007, she reported that fresh multiple vesicles had appeared on the site of the old  
lesion and has burst with itching and burning sensation...I think this may be a case of atopic  
(allergic) reaction to her brassier. I hope she would return for further consultation.  
**Length of time to achieve result:** various results at different times  
**Name/Patient Details:** O.S.; female; 42 years old; secretary
